### **Auditing**

Messier employs the audit approach currently being used by auditing professionals. This approach is a direct result of the demands of Sarbanes-Oxley, which has changed the way auditors do their jobs. The approach emphasizes understanding the entity (i.e., the organization or business being audited) and its environment (i.e. industry), and then assessing the business risks faced by the entity and how management controls those risks. This audit process focuses on business processes instead of accounting cycles. This unique and innovative approach has been developed in response to changing market dynamics. The systematic approach, referred to in the subtitle of the text, reflects the early introduction of three basic concepts that underlie the audit process: materiality, audit risk, and evidence; this allows Messier to build upon this model in subsequent chapters. These are central to everything an auditor does and a unique feature of Messier. As such, this approach helps students develop auditor judgment, a vital skill in today's auditing environment.

As auditors, we are trained to investigate beyond appearances to determine the underlying facts—in other words, to look beneath the surface. From the Enron and WorldCom scandals of the early 2000s to the financial crisis of 2007–2008 to present-day issues and challenges related to significant estimation uncertainty, understanding the auditor's responsibility related to fraud, maintaining a clear perspective, probing for details, and understanding the big picture are indispensable to effective auditing. With the availability of greater levels of qualitative and quantitative information ("big data"), the need for technical skills and challenges facing today's auditor is greater than ever. The author team of Louwers, Blay, Sinason, Strawser, and Thibodeau has dedicated years of experience in the auditing field to this new edition of Auditing & Assurance Services, supplying the necessary investigative tools for future auditors.

## **Auditing and Assurance Services**

The Tenth Edition of Auditing continues to provide students a balanced presentation of auditing concepts and procedures. The text reflects the challenges inherent in accounting and auditing practice, particularly in public accounting firms. The text is designed to provide flexibility for instructors; the thirteen chapters focus on the Auditing Process while the eight modules provide additional topics. There are three main approaches to teaching auditing, which you need to understand to match customer needs with our texts: 1. The Balance Sheet Approach—smallest market segment and more traditional, which teaches the audit procedures by using the individual balance

sheet (and related income statement) accounts. Our Whittington/ Pany text is the only one left in this segment. 2. The Audit Risk Model. This is an emerging area in auditing that considers audit risk, which is the probability that an auditor will give an inappropriate opinion on financial statements. 3. The Cycles Approach, which was first introduced by the market-leading textbook written by Arens/Loebbecke (Prentice Hall). Cycles are sets of accounts and business activities that go together in an accounting system. This is where Robertson fits in the market.

Appropriate for courses in Auditing and Special Topics in Accounting at the college or university level. Auditing is a second-year (upper-level) course directed at students in pursuit of a professional accounting designation—CA, GGA, and CMA. This innovative and easy-to-understand bestseller offers a mixture of auditing theory and practical applications for those who will work for auditing firms. It provides thorough coverage of the entire audit process, taking the reader step-by-step through an audit cycle, then showing how the process relates to all audit cycles. Reflecting the reality of today's working world, particularly the impact of technology on auditing procedures and techniques, the text has been thoroughly revised and updated, and is completely oriented to the practical application of computers in the field of auditing. It addresses five major issues in this area that have imposed change on the auditing environment: use of computer systems by audit clients; types of computer-based systems used by audit clients; form of working papers used in general practice; student knowledge of automated systems; and integration of automated systems into the review questions, problems, and cases. Students will learn not only auditing procedures, but also how to analyze data.
