This book explores two combined approaches (strategy and accounting) from a cross-disciplinary perspective in order to improve knowledge of value creation in various contexts. Existing studies on this topic have generally adopted a purely account-based or strategy-oriented approach to address this issue. However, this book draws upon a number of well-defined theoretical and empirical backgrounds and methodologies. Since the 1980s, many changes have occurred and companies have increasingly focused their strategies on value creation. The text introduces a breadth of new tools that help to illustrate fundamental managerial accounting concepts such as cost-volume-profit, variance analysis, time-value-of money, and cost flows. The book begins with an overview of the different ways in which accounting information is organized, providing readers with critical foundational knowledge on the ways in which financial and managerial accounting are related and why they differ. Later chapters address forecasting, cost-volume-profit analysis, product costing, and evaluation. Three chapters are dedicated to decision-making with an emphasis on making decisions on the basis of capacity, not time. The text closes with a chapter on creating value, which introduces students to DuPont analysis, the concept of Economic Value Added, value chain analysis, manufacturing cycle efficiency, and the idea of customer lifetime value.
