Whether students pursue a professional career in accounting or in other areas of management, they will interact with accounting systems. In all organizations, managers rely on management accounting systems to provide information to deal with changes in their operating environment. This book provides students and managers with an understanding and appreciation of the strengths and limitations of an organization's accounting system, and enables them to be intelligent and critical users of the system. The text highlights the role of management accounting as an integral part of the organization's strategy and not merely a set of individual concepts and computations. An analytical framework for organizational change is used throughout the book to underscore how organizations must adapt to create customer and organizational value. This framework provides a way to examine and analyze the organization's accounting system, and as a basis for evaluating proposed changes to the system. With international examples that bring the current business environment to the forefront, problems and cases to promote critical thinking, and online support for students and instructors, Management Accounting in a Dynamic Environment is no mere introductory textbook. It prepares readers to use accounting systems intelligently to achieve organizational success. The authors have identified several cases to accompany each chapter in the textbook. These are available through Ivey Publishing: <https://www.iveycases.com/CaseMateBookDetail.aspx?id=434>

Value creation is at the heart of an economic enterprise, defining its capability to serve customers and generate profits and growth. This fact has led to an ever-increasing set of tools and techniques that start with customers, focusing on serving their preferences from the very inception of a product until its disposal. And this data is required to implement a value creation approach that has its roots in the Management Accounting System (MAS). The resulting model is called the Value-based Cost Management System (VCMS). If you or any manager want to take the lessons you learned in product development, process management, and marketing, this book will help you extend this knowledge to your MAS. This book makes this transformation both logical and easy to implement, with a focus on the new types of information that can be garnered when the MAS is modified to fit the value creation approach. The authors of the book will provide, upon request, a simplified automated data collection template that will ease the implementation process.
