The Cartoon Introduction to Economics

Microeconomics

A sophisticated yet non-technical introduction to microeconomics for MBA students, now in its third edition.

Theory of Microeconomics

In economics the dominant framework for exploring the structure of market economies is provided by the neoclassical school of thought. This text aims to show how neoclassical theory is used to model market mechanisms, both in particular markets and in the market economy as a whole. Underpinning this analysis is an examination of what neoclassical economists regard as key decision makers in a market economy, namely households and firms. In analysing these demand and supply activities, this text aims to provide an introduction to the microeconomics of markets, that is, the behaviour of individual units of economic activity. However, individuals do not behave as independent entities in the economy. They make economic decisions in the context of a variety of institutional structures. The text presents an alternative to neoclassicism by introducing the institutionalist perspective of economic thought. In this approach the social interactions between individuals are placed at the heart of economic activity. Perspectives are presented as a critique of neoclassical economics by providing an appraisal of neoclassical theory and developing an alternative.

Solved problems in every chapter motivate learners to confidently connect with the theory to solve economic problems and analyse current economic events.
